VERSATILE PERFORMANCE

The TI-1500 performs basic addition, subtraction, multiplication, and division and features a percent key for easy calculation of taxes, discounts, mark-ups, and other percentage problems. Other time-saving features include automatic constant in the four basic functions and repeat addition or subtraction.

KEYBOARD

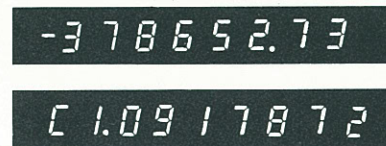

The keyboard consists of 10 digit keys, a decimal key, and 8 function keys. Manufactured by Texas Instruments, all keys are single-function for simple entry of long or complex problems.

A convenient algebraic data entry system allows problems to be entered in the same order as they are written. The user just pushes the keys as he says the problem. And key locations can be memorized easily to speed and simplify computations without looking at the keyboard.

DISPLAY

The 8-digit light-emitting diode display is clearly visible from either hand-held or desk-top operation. All numerals are displayed plus the floating decimal point, negative sign, and calculation overflow indication. The floating negative sign appears just to the left of the number instead of at the extreme left of the display.

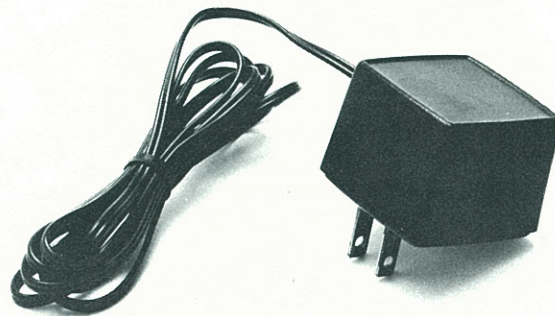

POWER SOURCE

The TI-1500 operates from two "AA" nickel-cadmium batteries that provide 4-6 hours of continuous calculations before recharging. Included AC Adapter/Charger can recharge batteries overnight and operate calculator from household outlet.

NEW STREAMLINED DESIGN

Texas Instruments has packed the calculating power of much larger portable calculators into the smaller, streamlined design of the TI-1500. It can be held easily with the fingertips or placed on a flat surface for desk-type operation. A true pocket calculator, it weighs less than 7 ounces and fits in shirtpocket, purse, briefcase — almost anywhere.
